

## FRIENDS OF THE NATIONAL INSTITUTE ON AGING

A broad-based coalition of aging, disease, research, and patient groups supporting the mission of the National Institute on Aging (NIA).

October 7, 2013

President Barack Obama  
The White House  
1600 Pennsylvania Avenue, NW  
Washington, DC 20500

Dear Mr. President:

We, the undersigned organizations, are writing to thank your Administration for supporting the National Institutes of Health (NIH), and the National Institute on Aging (NIA) in particular, and to encourage you to continue supporting aging research at the NIH in fiscal year (FY) 2015. To this end, we **strongly urge you to include an increase of \$500 million from the FY 2013 level, in the Administration's proposed FY 2015 budget to support aging research efforts at the NIH.**

The institutes that make up the NIH, and in particular the NIA, lead the national scientific effort to understand the nature of aging in order to promote the health and well-being of older adults whose numbers are projected to increase dramatically in the coming years due to increased life expectancy and the aging of the baby boom generation. According to the U.S. Census Bureau, the number of people age 65 and older will more than double between 2010 and 2050 to 88.5 million or 20 percent of the population; and those 85 and older will increase three-fold, to 19 million. As the 65+ population increases so will the prevalence of diseases disproportionately affecting older people..

Alzheimer's disease and related dementias and the tremendous toll it places on caregivers are a dramatic example of the crisis ahead. The NIA reports that as many as 5.1 million Americans over 65 are today dying with Alzheimer's disease and the numbers of Americans that will die of this disease are projected to increase dramatically in the coming years. It is estimated that over 10 million baby boomers will develop Alzheimer's in addition to today's victims. Alzheimer's disease will also cause physical and emotional impairments on more and more families and caregivers. The growing numbers of Alzheimer's victims and the rapidly-rising costs associated with the disease will put a heavy economic burden on families, businesses and government. Estimates are that the costs of Alzheimer's care will amount to \$2 trillion by 2020.

In stark contrast to the increasing costs of healthcare for the aging population, we as a nation are making a miniscule, and declining, investment in the prevention, treatment or cure of aging conditions. NIH's fiscal year 2013 budget fell by \$1.71 billion, or 5.5 percent, compared with fiscal year 2012. We appreciate that despite a budget shortfall, NIH dedicated an additional \$80 million for Alzheimer's disease research with support from the Administration last year. This funding has been allocated to many worth Alzheimer's disease research programs, but there are many recommendations that grew out of the NIH's May 2012 Alzheimer's Disease Research Summit: Path to Treatment and Prevention,

that must be supported to meet the goal of finding effective therapies set out in our National Plan to Address Alzheimer's Disease.

With an infusion of much needed support in FY 2015, NIH can expand promising, recent research activities to:

- implement new prevention and treatment clinical trials, research training initiatives, care interventions, and genetic research studies developed as part of your the National Plan to Address Alzheimer's disease;
- bolster trans-NIH initiatives developed by the NIH GeroScience Interest Group to understand basic cellular and molecular underpinnings of aging as a principal risk factor for chronic disease and to explore common mechanisms governing relationships between aging and chronic disease. ;
- understand the impact of economic concerns on older adults by examining work and retirement behavior, health and functional ability, and policies that influence individual well-being; and
- support family caregivers by enhancing physician-family communication during end-of-life and critical care.

NIH is poised to accelerate the scientific discoveries that we as a nation are counting on. With millions of Americans facing the loss of their functional abilities, their independence, and their lives to chronic diseases of aging, there is a pressing need for robust and sustained investment in the work of the NIH. In every community in America, healthcare providers depend upon NIH-funded discoveries to help their patients and caregivers lead healthier and more independent lives. In these same communities, parents are hoping NIH-funded discoveries will ensure that their children have a brighter future, free from the diseases and conditions of aging that plague our nation today.

**Considering what the federal government spends on the health care costs associated with age-related diseases, it makes sound economic sense to increase federal resources for aging research.**

Chronic diseases associated with aging afflict 80 percent of the age 65+ population and account for more than 75 percent of Medicare and other federal health expenditures. Unprecedented increases in age-related diseases as the population ages are one reason the Congressional Budget Office projects that total spending on healthcare will rise to 25 percent of the U.S. GDP by 2025.

Research that can be translated quickly into effective prevention and efficient health care will reduce the burden of a "Silver Tsunami" of age-associated chronic diseases. Breakthroughs from NIH research can lead to treatments and public health interventions that could delay the onset of costly conditions such as arthritis, heart disease, stroke, diabetes, bone fractures, age-related blindness, Alzheimer's, ALS, and Parkinson's diseases. Such advances could save trillions of dollars by the middle of the current century. We are convinced that providing NIH with additional resources is one of the smartest investments your Administration can make.

As your Administration develops a proposed FY 2015 budget that includes health research for all Americans, we look forward to working with you. Thank you for considering our views, and please do not hesitate to contact Linda Harootyan, Chair, Friends of the NIA, at (202)587-2822, or email [harootya@geron.org](mailto:harootya@geron.org); Cynthia Bens, Vice President of Public Policy, Alliance for Aging Research, at (202) 293-2856 or email [cbens@agingresearch.org](mailto:cbens@agingresearch.org); if you have questions or would like additional information.

Sincerely,
